

# SAFETY SHOT!

ALWAYS ON TARGET FOR SAFETY!

TAKE AIM AT SAFETY!

## TRENCHING AND EXCAVATION / ZANJAS Y EXCAVACIONES

1) Before you start digging locate and identify existing underground utilities. CALL BEFORE YOU DIG! In Texas call 1-800-DIG-TESS!

2) Consider your specific job site conditions such as:

- ✓ Underground and overhead utilities
- ✓ Soil type and stability
- ✓ Proximity and condition of nearby structures
- ✓ Traffic
- ✓ Surface water runoff and ground water
- ✓ Weather

3) Scale back loose material from the edge of the trench and place all materials, equipment, and spoils at least two feet from the edge of the trench.

4) Daily inspections of excavations and protective systems must be made by a "Competent Person" for evidence of a situation that could result in possible cave-ins, failure of protective systems, hazardous atmospheres, or other hazardous conditions.

5) A safe means of entering and exiting excavations must be provided for workers. A stairway, ladder, ramp, or other means of egress must be located in trench excavations which are four feet or more in depth and require no more than 25 ft. of lateral travel.
